ENGINEERING STRUCTURES

Index to Volume 20 (1998)

Numbers 1–2 (January–February) pp 1–132
Number 3 (March) pp 133–238
Numbers 4–6 (April–June) pp 239–570
Number 7 (July) pp 571–646
Number 8 (August) pp 647–784
Number 9 (September) pp 785–860
Number 10 (October) pp 861–930
Number 11 (November) pp 931–1028
Number 12 (December) pp 1029–1114

Article Index

Numbers 1–2

Editorial 1
Announcement 3
In situ measurement of dead and live load stresses in a masonry arch
T. G. Hughes and R. Pritchard 5
Inelastic behavior of sand–lime mortar joint masonry arches
B. T. Rosson, K. Søyland and T. E. Boothby 14
The nave of the Madeleine of Vézelay
J. A. Medero Navedo, T. E. Boothby and E. Smith 25
Numerical analysis of old masonry buildings: a comparison among constitutive models
F. Genna, M. Di Pasqua, M. Veroli and P. Ronca 37
Development of an analytical model for treating bridge–vehicle interaction
G. H. Tan, G. H. Brameld and D. P. Thambiratnam 54
Acceleration feedback control of seismic structures
L. L. Chung, L. Y. Wu and T. G. Jin 62
Finite element analysis of column supported hyperbolic cooling towers using semi-loof shell and beam elements
Karisiddappa, M. N. Viladkar, P. N. Godbole and P. Krishna 75
Comparative study of finite element nodal ordering methods
A. Kaveh and G. R. Roosta 86
Monte Carlo simulation of dispersions in composite steel–concrete column strength interaction
S. A. Mirza 97
Experimental investigation of embedded steel plates in reinforced concrete structures
J. J. Kallolil, S. K. Chakrabarti and R. C. Mishra 105
Effect of column axial load on composite connection behaviour
B. Ahmed and D. A. Nethercot 113
Book Review 129
Calendar 130
Announcement 131
Erratum 132

Number 3

Editorial
J. T. P. Yao 133
Design of an active mass damper for a tall TV tower in Nanjing, China
H. Cao, A. M. Reinhorn and T. T. Soong 134
Implementation issues and testing of a hybrid sliding isolation system
M. A. Riley, A. M. Reinhorn and S. Nagarajaiah 144
Model identification and control of a tuned liquid damper
P.-M. Chang, J. Y. K. Lou and L. D. Lutes 155
Seismic response control tests and simulations by fuzzy optimal logic of building structures
H. Fujitani, M. Midorikawa, M. Iiba, Y. Kitagawa, T. Miyoshi, H. Kawamura, A. Tani and T. Mochio 164
Characteristics of active vibration control system using gyro-stabilizer
H. Higashiyama, M. Yamada, Y. Kazao and M. Namiki 176
Intelligent fuzzy optimal control of building structures
A. Tani, H. Kawamura and S. Ryu 184
Parametric study and simplified design of tuned mass dampers
R. Rana and T. T. Soong 193
Photoinduced grating-based optical fiber sensors for structural analysis and control
M. de Vries, V. Bhatia, T. D'Alberto, V. Arya and R. O. Claus 205
Reliability based stability analysis for actively controlled structures
K. Breitung, F. Casciati and L. Faravelli 211
Cost-effectiveness in active structural control
Y. K. Wen and M. Shinozuka 216
Reduced-order H_∞ and *LQR* control for wind-excited tall buildings
J. C. Wu, J. N. Yang and W. E. Schmitendorf 222
Calendar 237

Numbers 4–6

Foreword 239
Lessons learned from the Northridge earthquake
D. K. Miller 249
Lessons from damage to steel buildings during the Northridge earthquake
S. A. Mahin 261
Classification of damage to steel buildings observed in the 1995 Hyogoken–Nanbu earthquake
M. Nakashima, K. Inoue and M. Tada 271
SAC Steel Project: Summary of Phase 1 testing investigation results
J. O. Malley 300
Fracture of steel during an earthquake—state-of-the-art in Japan
H. Kuwamura 310
High-strength steel: implications of material and geometric characteristics on inelastic flexural behavior
J. M. Ricles, R. Sause and P. S. Green 323
Recent developments in hybrid structures in Japan—research, design and construction
S. Morino 336
Ultimate strength and ductility of state-of-the-art concrete-filled steel bridge piers in Japan
T. Kitada 347
Overview of hybrid and composite systems for seismic design in the United States
C. W. Roeder 355
Analysis and design problems for PR composite frames subjected to seismic loads
R. T. Leon 364
Criteria for suppression of deformation concentration of building frames under severe earthquakes
K. Uetani and H. Tagawa 372
Static and dynamic post-buckling behavior of truss structures
M. Tada and A. Suito 384
A connection model for the seismic analysis of welded steel moment frames
J. L. Gross 390
A distributed plasticity model for cyclic analysis of concrete-filled steel tube beam-columns and composite frames
J. F. Hajjar, A. Molodan and P. H. Schiller 398
Analysis of localization of plastic buckling patterns under cyclic loading
Y. Goto 413
Dynamic stability of structural systems subjected to base excitation
K. D. Hjelmstad and E. B. Williamson 425
Stability of damaged steel moment frames in Los Angeles
A. Astaneh-Asl, D. Modjtahedi, K. McMullin, J.-H. Shen and E. D'Amore 433
A prospect for future earthquake-resistant design
H. Akiyama 447
Pros and cons of a pushover analysis of seismic performance evaluation
H. Krawinkler and G. D. P. K. Seneviratna 452
Seismic design by plastic method
S. C. Goel and S. Leelataviwat 465
Inelastic seismic design verification method for steel bridge piers using a damage index based hysteretic model
T. Usami and S. Kumar 472
Inelastic analyses of a 17-story steel framed building damaged during Northridge
W.-M. Chi, S. El-Tawil, G. G. Deierlein and J. F. Abel 481
Instability of buildings during seismic response
D. Bernal 496
On cross effects of seismic responses of structures
G. C. Lee and Z. Liang 503
Reinforcing of steel moment connections with cover plates: benefits and limitations
M. D. Engelhardt and T. A. Sabol 510
Rigid-bolted repair method for damaged moment connections
K. Kasai, I. Hodgson and D. Bleiman 521
Seismic diagnosis for rehabilitation and upgrading of steel gymnasiums
K. Ohi and K. Takanashi 533
Retrofitting for seismic upgrading of steel bridge columns
K. Nishikawa, S. Yamamoto, T. Natori, K. Terao, H. Yasunami and M. Terada 540
Cyclic performance of haunch repaired steel moment connections: experimental testing and analytical modeling
C.-M. Uang, D. Bondad and C.-H. Lee 552
Stability of weld metal subjected to cyclic static and seismic loading
R. H. R. Tide 562
Calendar 570

Number 7

Non-linear buckling and postbuckling of elastic arches
Y.- L. Pi and N. S. Trahair 571
Control performance of liquid column vibration absorbers
C. C. Chang and C. T. Hsu 580
Equivalent continuum representation of lattice beams: spectral element approach
U. Lee 587
Modelling of liquid sloshing in rectangular tanks

with flow-dampening devices
P. Warnitchai and T. Pinkaew 593
Estimating extreme tendon response using environmental contours
J. M. Niedzwecki, J. W. van de Lindt and J. T. P. Yao 601
Analyses of seismic performance of a code designed reinforced concrete building
J. A. Munshi and S. K. Ghosh 608
Wind-induced interference effects on buildings – a review of the state-of-the-art
A. C. Khanduri, T. Stathopoulos and C. Bédard 617
Strengthening of RC beams by using sprayed concrete: experimental approach
Y. G. Diab 631
Book Reviews 644
Calendar 645

Number 8

Analysis of practical slab configurations using automated yield-line analysis and geometric optimization of fracture patterns
A. C. A. Ramsay and D. Johnson 647
Equivalent linear ductility design of soil–structure interaction systems
I. Takewaki 655
A distributed plasticity model for concrete-filled steel tube beam-columns with interlayer slip
J. F. Hajjar, P. H. Schiller and A. Molodan 663
Response of two-way eccentric building to nonuniform base excitations
H. Hao 677
Reliability of MDOF-systems with hysteretic devices
H. J. Pradlwarter, G. I. Schuëller and U. Dorka 685
Forced vibration studies of sagged cables with oil damper using a hybrid method
Y. L. Xu, Z. Yu and J. M. Ko 692
Pre-stressing and Eurocode E.C.2
M. A. Pisani 706
The surface stress density method as a form-finding tool for tensile membranes
B. Maurin and R. Motro 712
Experiments on a base-isolated building in Santiago, Chile
M. O. Moroni, M. Sarrazin and R. Boroschek 720
The effect of annular two-phase flow upon the natural frequencies of a pipe
D. G. Gorman, M. Liu and J. Horacek 726
Natural frequency response of vertical cantilever composite shells containing fluid
C. B. Sharma, M. Darvizeh and A. Darvizeh 732
Postbuckling analysis of stiffened laminated cylindrical shells under combined external liquid pressure and axial compression
H.-S. Shen 738
Buckling of short tanks due to hurricanes
F. G. Flores and L. A. Godoy 752
Finite element evaluation of pier moment–rotation characteristics in continuous-span steel I Girders
K. E. Barth and D. W. White 761
A note on compression strength reduction factor for a buckled strut in seismic-resisting braced system
A. M. Remennikov and W. R. Walpole 779
Calendar 783

Number 9

The effects of ASR on the properties of concrete and the implications for assessment
A. E. K. Jones and L. A. Clark 785
A simple optimal pole location technique for structural control
C.-C. Chang and L.-O. Yu 792
Stochastic assessment of the lifetime maximum live load
K. A. Andam and S. B. A. Asantey 805
Responses of a cracked half-space subjected to an antiplane impact
S. W. Liu, J. C. Sung and M. S. Lin 819
Dynamics of an aerial cableway system
J. M. W. Brownjohn 826
Numerical simulation of turbulent fluctuations along the axis of a bridge
W. W. Yang and T. Y. P. Chang 837
Seismic response prediction of HDR bearings using fractional derivative Maxwell model
J. S. Hwang and J. C. Wang 849
Book reviews 857
Calendar 859

Number 10

Editorial 861
Specific design and construction details of the Boxberg cooling tower
U. Eckstein and F.-J. Nunier 862
Tower on meridional supports: is it really the solution?
T. Castiau 868
Influence of adjacent buildings on wind effects on cooling towers
H.-J. Niemann and H.-D. Köpper 874
Time-domain simulation of the non-linear response of cooling tower shells subjected to stochastic wind loading
W. Zahlten and C. Borri 881
Non-linear behaviour of RC cooling towers and its effects on the structural design
U. Wittek and R. Meiswinkel 890
Design for durability of natural draught cooling towers by life-cycle simulations
W. B. Krätzig, C. Könke, D. Mancevski and K. P. Gruber 899
Strengthening of natural draught cooling tower shells with stiffening rings
P. B. Bosman, I. G. Strickland and R. P. Prukl 909
A local–global FE model for nonlinear analysis of column-supported shells of revolution
P. L. Gould, R. V. Ravichandran and S. Sridharan 915
Study of a proposed 200 m high natural draught cooling tower at power plant Frimmersdorf/Germany
D. Busch, R. Harte and H.-J. Niemann 920
Calendar 928

Number 11

Editorial 931
Optimal planning of retrofitting interventions on bridges in a highway network
G. Augusti, M. Ciampoli and D. M. Frangopol 933
Probabilistic response of prestressed concrete bridges to fatigue
J. R. Casas and C. Crespo-Minguillon 940
Field load testing and reliability-based integrity assessment of segmental PC box girder bridges before opening to traffic
H.-N. Cho, Y.-M. Choi and B.-C. Sho 948
Application of reliability analysis in bridge management
P. C. Das 957
Probabilistic analysis of resistance degradation of reinforced concrete bridge beams under corrosion
M. P. Enright and D. M. Frangopol 960
Bridge reliability experiences in Japan
H. Furuta 972
Accuracy of NDE in bridge assessment
J. Martin, M. S. A. Hardy, A. S. Usmani and M. C. Forde 979
Bridge load and resistance models
A. S. Nowak and M. M. Szerszen 985
Fatigue of existing reinforced concrete bridge deck slabs
M. Schläfli and E. Brühwiler 991
Reliability during temporary erection phases
R. G. Sexsmith 999
Assessment of the reliability profiles for concrete bridges
P. Thoft-Christensen 1004
Effect of reinforcement corrosion on reliability of highway bridges
D. V. Val, M. G. Stewart and R. E. Melchers 1010
The management of bridges in New York City
B. Yanev 1020
Calendar 1027

Number 12

Editorial 1029
Design of steel MRF connections before and after 1994 Northridge earthquake
E. P. Popov, T.-S. Yang and S.-P. Chang 1030
Seismic design of flexible-stiff mixed frame with energy concentration
Y. Harada and H. Akiyama 1039
The seismic behaviour of steel moment-resisting frames with stiffening braces
L. Martinelli, M. G. Mulas and F. Perotti 1045
Performance of steel bridges during the 1995 Hyogoken–Nanbu (Kobe, Japan) earthquake—a North American perspective
M. Bruneau 1063
Response of stiffened and unstiffened plates subjected to blast loading
L. A. Louca, Y. G. Pan and J. E. Harding 1079
Design of Tension-Only Concentrically Braced Steel Frames for seismic induced impact loading
A. Filiatrault and R. Tremblay 1087
Dynamic response of guyed masts
M. K. S. Madugula, Y. M. F. Wahba and G. R. Monforton 1097
Modal analysis of suspension bridge deck units in erection stage
J. M. Ko, S. D. Xue and Y. L. Xu 1102
Calendar 1113

Keyword Index

a boundary layer theory of shell buckling
combined loading, postbuckling, singular perturbation technique, stiffened laminated cylindrical shell, structural stability, 738

acceleration feedback
active control, earthquake engineering, structural dynamics, 62

active control
acceleration feedback, earthquake engineering, structural dynamics, 62

active control
earthquake, mass damper, wind forces, 134

active control
experimentation, hybrid systems, implementation, nonlinear control, seismic excitations, shaking table, sliding systems, 144

active control
inelastic structures, life cycle cost, risk analysis, structural reliability, 216

active vibration control
full-scale experiment, gyro-stabilizer, numerical analysis, variable gain control, 176

aeroelastic wind tunnel tests
cooling tower groups and adjacent buildings, design factors, stress responses, wind interference, 874

arch
bridge, finite element, inelastic, masonry, mortar, shakedown, 14

arch
buckling, elastic, nonlinear, postbuckling, 571

arch
flatjack, *in situ* stress, masonry, 5

arch
masonry, medieval, mortar, pier, Romanesque, 25

area-dependency
assembly regions, EUDL, extraordinary load, stochastic model, sustained load, 805

ASR
compressive strength, expansion assessment, Young's modulus, 785
assembly regions
area-dependency, EUDL, extraordinary load, stochastic model, sustained load, 805
automated yield-line analysis
geometric optimization, limit analysis and design of slabs, 647
autostress design
finite element modeling, inelastic design, moment capacity, moment–rotation behavior, nonlinear analysis, rotation capacity, steel bridges, 761
axisymmetrical shell
cooling tower, finite element analysis, local–global model, shell structure, 915
bandwidth optimization
finite element nodal ordering, graphs, sparsity, stiffness matrices, 86
base isolation
high damping rubber, system identification, 720
base plate
cast-in-place anchor, cast-in-place plate, embedded plates, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel anchor, steel plate, steel-lined concrete, 105
base-isolated structure
earthquake-resistant design, flexible–stiff mixed structure, structural performance, 447
beam
rehabilitation, reinforced concrete, reinforcement, shotcrete, 631
beam-to-column connection
damage, distribution, Hyogoken–Nanbu earthquake, steel building, 271
beam-to-column connections
seismic connections, steel connections, welded connections, 1030
bearing devices
buckling, damages, dynamic interaction, numerical simulation, seismic performance, steel structures, 282
bearing failures
bridges, brittle fractures, buckling, Canadian practice, design codes, earthquake, seismic, seismic restrainers, steel, steel columns, 1063
blast response
non-linear analysis, plate structures, 1079
bolted rigid moment connection
full-size test, Northridge earthquake, plastic rotation, repair, welded connection damage, 521
bond slip
concrete-filled steel tube, distributed plasticity finite element, 663
boundary integral
crack, finite element, 819
bow-shaped deflection mode
earthquake resistant design, suppression of deformation concentration, symmetry limit, tall buildings, 372
braced frames
impact, seismic, 1087
bridge
arch, finite element, inelastic, masonry, mortar, shakedown, 14
bridge
chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, suspension, tyre, vehicle, wheel, 54
bridge
condition, management, 1020
bridge
spectral representation, stochastic simulation, wind field, 837
bridge pier
damage index, ductility, hysteretic model, inelastic analysis, seismic design, thin-walled, ultimate strength, 472
bridge reliability
field load testing, integrity assessment, segmental PC-box bridges, 948
bridges
bearing failures, brittle fractures, buckling, Canadian practice, design codes, earthquake, seismic, seismic restrainers, steel, steel columns, 1063
bridges
concrete, fatigue, 991
bridges
concrete, impact echo, NDE, radar, ultrasonics, 979
bridges
corrosion, damage, degradation, Monte Carlo Simulation, reinforced concrete, time-variant resistance, 960
bridges
deteriorating structures, dynamic programming, highway networks, life-cycle, optimal resource allocation, reinforced concrete, reliability, 933
bridges
deterioration, reliability analysis, 1010
bridges
erection, reliability, 999
bridges
fatigue, prestressing, reliability, 940
bridges
lifetime, reliability, risk, safety, 972
brittle fracture
earthquake resistance, structural steel, 310
brittle fracture
inelastic analysis, seismic performance, steel structures, welded connections, 390
brittle fractures
bearing failures, bridges, buckling, Canadian practice, design codes, earthquake, seismic, seismic restrainers, steel, steel columns, 1063
buckling
arch, elastic, nonlinear, postbuckling, 571
buckling
bearing devices, damages, dynamic interaction, numerical simulation, seismic performance, steel structures, 282
buckling
bearing failures, bridges, brittle fractures, Canadian practice, design codes, earthquake, seismic, seismic restrainers, steel, steel columns, 1063
buckling
cooling towers, natural frequencies, 868
buckling
cylindrical shell, dynamic stability, finite elements, nonlinear behavior, thin-walled structures, wind load, 752
building
connections, dynamic analysis, earthquake, fracture, inelastic analysis, seismic, steel frame, 481
cableway dynamics measurement
, 826
Canadian practice
bearing failures, bridges, brittle fractures, buckling, design codes, earthquake, seismic, seismic restrainers, steel, steel columns, 1063
capacity design
concentrically braced steel frames, seismic behaviour, strength reduction factor, 779
cast-in-place anchor
base plate, cast-in-place plate, embedded plates, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel anchor, steel plate, steel-lined concrete, 105
cast-in-place plate
base plate, cast-in-place anchor, embedded plates, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel anchor, steel plate, steel-lined concrete, 105
chassis
bridge, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, suspension, tyre, vehicle, wheel, 54
code design
coupled wall, dual shearwall-frame system, moment resisting frame, reinforced concrete building, seismic analysis, seismic design, seismic performance, 608
collapse
dynamic instability, instability, nonlinear seismic response, 496
combined loading
a boundary layer theory of shell buckling, postbuckling, singular perturbation technique, stiffened laminated cylindrical shell, structural stability, 738
compact criteria
flexural ductility, high performance steel, high strength steel, local buckling, rotation capacity, 323
composite
concrete, seismic behavior, steel, 355
composite column
ductility, strength, 347
composite connections
connections, partially restrained connections, seismic design, steel frames, 364
composite construction
connections, joints, steel structures, structural design, 113
compressive strength
ASR, expansion assessment, Young's modulus, 785
concentrical bracing
dynamic analysis, moment-resisting frames, seismic actions, 1045
concentrically braced steel frames
capacity design, seismic behaviour, strength reduction factor, 779
concrete
bridges, fatigue, 991
concrete
bridges, impact echo, NDE, radar, ultrasonics, 979
concrete
composite, seismic behavior, steel, 355

concrete bridges
corrosion modelling, reliability assessment, 1004
concrete-filled steel tube
bond slip, distributed plasticity finite element, 663
concrete-filled steel tube
cyclic analysis, distributed plasticity finite element, 398
concrete-filled tube
hybrid wall, RC column S beam system, steel reinforced concrete, 336
condition
bridge, management, 1020
connections
building, dynamic analysis, earthquake, fracture, inelastic analysis, seismic, steel frame, 481
connections
composite connections, partially restrained connections, seismic design, steel frames, 364
connections
composite construction, joints, steel structures, structural design, 113
connections and weld metal brittle fracture
earthquake, 562
construction stage
deck unit, finite element modeling, modal analysis, suspension bridge, 1102
continuum modeling
lattice beam, spectral element, 587
contour inflation
environmental contours, experimental data, structural reliability, TLP tendons, 601
cooling tower
axisymmetrical shell, finite element analysis, local–global model, shell structure, 915
cooling tower
design, non-linearities, 890
cooling tower groups and adjacent buildings
aeroelastic wind tunnel tests, design factors, stress responses, wind interference, 874
cooling tower shell
finite element analysis, stiffening ring, 909
cooling towers
buckling, natural frequencies, 868
cooling towers
time-domain simulation, wind loading, 881
corrosion
bridges, damage, degradation, Monte Carlo Simulation, reinforced concrete, time-variant resistance, 960
corrosion modelling
concrete bridges, reliability assessment, 1004
coupled wall
code design, dual shearwall-frame system, moment resisting frame, reinforced concrete building, seismic analysis, seismic design, seismic performance, 608
crack
boundary integral, finite element, 819
cracking
finite elements, masonry structures, plasticity, 37
cyclic analysis
concrete-filled steel tube, distributed plasticity finite element, 398
cyclic damage
elasto-plastic simulations, natural draught cooling towers, 899
cyclic loading
fracture, seismic resistant steel connections, 510
cyclic loading
local buckling, steel pipe piers, 291
cylindrical shell
buckling, dynamic stability, finite elements, nonlinear behavior, thin-walled structures, wind load, 752
damage
beam-to-column connection, distribution, Hyogoken–Nanbu earthquake, steel building, 271
damage
bridges, corrosion, degradation, Monte Carlo Simulation, reinforced concrete, time-variant resistance, 960
damage
dynamics, earthquake, inelastic, stability, 425
damage index
bridge pier, ductility, hysteretic model, inelastic analysis, seismic design, thin-walled, ultimate strength, 472
damage level
retrofit planning, seismic diagnosis, steel frame, upgrading planning, 533
damages
bearing devices, buckling, dynamic interaction, numerical simulation, seismic performance, steel structures, 282
damper
frequency crossover, hybrid method, sagged cable, vibration mitigation, 692
damping screen
flow-dampening devices, liquid sloshing, Morison's formula, potential flow theory, shaking table tests, tuned liquid damper, vibration control, 593
deck unit
construction stage, finite element modeling, modal analysis, suspension bridge, 1102
degradation
bridges, corrosion, damage, Monte Carlo Simulation, reinforced concrete, time-variant resistance, 960
design
cooling tower, non-linearities, 890
design
multi-tuned mass dampers, parametric study, tuned mass dampers, 193
design codes
bearing failures, bridges, brittle fractures, buckling, Canadian practice, earthquake, seismic, seismic restrainers, steel, steel columns, 1063
design earthquakes
ductility design, elastic–plastic analysis, equivalent linearization, inverse eigenmode problem, non-classically damped system, soil–structure interaction, 655
design factors
aeroelastic wind tunnel tests, cooling tower groups and adjacent buildings, stress responses, wind interference, 874
deteriorating structures
bridges, dynamic programming, highway networks, life-cycle, optimal resource allocation, reinforced concrete, reliability, 933
deterioration
bridges, reliability analysis, 1010
distributed plasticity finite element
bond slip, concrete-filled steel tube, 663
distributed plasticity finite element
concrete-filled steel tube, cyclic analysis, 398
distribution
beam-to-column connection, damage, Hyogoken–Nanbu earthquake, steel building, 271
dual shearwall-frame system
code design, coupled wall, moment resisting frame, reinforced concrete building, seismic analysis, seismic design, seismic performance, 608
ductility
bridge pier, damage index, hysteretic model, inelastic analysis, seismic design, thin-walled, ultimate strength, 472
ductility
composite column, strength, 347
ductility
seismic capacity, steel highway bridge pier, 540
ductility
seismic design, welded connections, 249
ductility design
design earthquakes, elastic–plastic analysis, equivalent linearization, inverse eigenmode problem, non-classically damped system, soil–structure interaction, 655
dynamic
bridge, chassis, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, suspension, tyre, vehicle, wheel, 54
dynamic analysis
building, connections, earthquake, fracture, inelastic analysis, seismic, steel frame, 481
dynamic analysis
concentrical bracing, moment-resisting frames, seismic actions, 1045
dynamic analysis
hysteretic devices, MDOF-systems, random earthquake loading, structural reliability, 685
dynamic analysis
post-buckling behavior, truss structure, 384
dynamic instability
collapse, instability, nonlinear seismic response, 496
dynamic interaction
bearing devices, buckling, damages, numerical simulation, seismic performance, steel structures, 282
dynamic load allowance
bridge, chassis, dynamic, grillage analogy, impact factor, interaction, simulation, suspension, tyre, vehicle, wheel, 54
dynamic programming
bridges, deteriorating structures, highway networks, life-cycle, optimal resource allocation, reinforced concrete, reliability, 933
dynamic stability
buckling, cylindrical shell, finite elements, nonlinear behavior, thin-walled structures, wind load, 752

dynamic test
haunch, Northridge earthquake, panel zone, steel moment connection, 552
dynamics
damage, earthquake, inelastic, stability, 425
earthquake
active control, mass damper, wind forces, 134
earthquake
bearing failures, bridges, brittle fractures, buckling, Canadian practice, design codes, seismic, seismic restrainers, steel, steel columns, 1063
earthquake
building, connections, dynamic analysis, fracture, inelastic analysis, seismic, steel frame, 481
earthquake
connections and weld metal brittle fracture, 562
earthquake
damage, dynamics, inelastic, stability, 425
earthquake engineering
acceleration feedback, active control, structural dynamics, 62
earthquake excitation
independent modal space control, pole placement, structural control, 792
earthquake resistance
brittle fracture, structural steel, 310
earthquake resistant design
bow-shaped deflection mode, suppression of deformation concentration, symmetry limit, tall buildings, 372
earthquake-resistant design
base-isolated structure, flexible–stiff mixed structure, structural performance, 447
earthquakes
moment frames, Northridge earthquake, stability, steel structures, weld damage, 433
eccentric
nonuniform ground excitations, torsional response, 677
elastic
arch, buckling, nonlinear, postbuckling, 571
elastic–plastic analysis
design earthquakes, ductility design, elastic–plastic analysis, equivalent linearization, inverse eigenmode problem, non-classically damped system, soil–structure interaction, 655
elasto-plastic simulations
cyclic damage, natural draught cooling towers, 899
embedded plates
base plate, cast-in-place anchor, cast-in-place plate, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel anchor, steel plate, steel-lined concrete, 105
energy transfer
modal coupling, multi-direction ground motions, nonproportional damping, orthogonal effect, seismic response, stiffness coupling, 503
environmental contours
contour inflation, experimental data, structural reliability, TLP tendons, 601
equivalent linearization
design earthquakes, ductility design, elastic–plastic analysis, inverse eigenmode problem, non-classically damped system, soil–structure interaction, 655
erection
bridges, reliability, 999
EUDL
area-dependency, assembly regions, extraordinary load, stochastic model, sustained load, 805
expansion assessment
ASR, compressive strength, Young's modulus, 785
experimental data
contour inflation, environmental contours, structural reliability, TLP tendons, 601
experimentation
active control, hybrid systems, implementation, nonlinear control, seismic excitations, shaking table, sliding systems, 144
extraordinary load
area-dependency, assembly regions, EUDL, stochastic model, sustained load, 805
fatigue
bridges, concrete, 991
fatigue
bridges, prestressing, reliability, 940
fiber Bragg gratings
fiber optic sensors, long-period gratings, structural analysis, 205
fiber optic sensors
fiber Bragg gratings, long-period gratings, structural analysis, 205
field load testing
bridge reliability, integrity assessment, segmental PC-box bridges, 948
finite element
arch, bridge, inelastic, masonry, mortar, shakedown, 14
finite element
boundary integral, crack, 819
finite element analysis
axisymmetrical shell, cooling tower, local–global model, shell structure, 915
finite element analysis
cooling tower shell, stiffening ring, 909
finite element modeling
autostress design, inelastic design, moment capacity, moment–rotation behavior, nonlinear analysis, rotation capacity, steel bridges, 761
finite element modeling
construction stage, deck unit, modal analysis, suspension bridge, 1102
finite element nodal ordering
bandwidth optimization, graphs, sparsity, stiffness matrices, 86
finite elements
buckling, cylindrical shell, dynamic stability, nonlinear behavior, thin-walled structures, wind load, 752
finite elements
cracking, masonry structures, plasticity, 37
flatjack
arch, *in situ* stress, masonry, 5
flexible-stiff mixed frame
hysteretic damper, viscous damper, 1039
flexible–stiff mixed structure
base-isolated structure, earthquake-resistant design, flexible–stiff mixed structure, structural performance, 447
flexural ductility
compact criteria, high performance steel, high strength steel, local buckling, rotation capacity, 323
flow-dampening devices
damping screen, liquid sloshing, Morison's formula, potential flow theory, shaking table tests, tuned liquid damper, vibration control, 593
fluid flow
pipes, two phase, vibration, 726
fluid-elastic structure interaction
natural frequency, orthotropic cantilever cylindrical shells, 732
form-finding
surface stress density method, tensile membrane, 712
fractional derivative models
high damping rubber bearings, Maxwell model, seismic isolation, 849
fracture
building, connections, dynamic analysis, earthquake, inelastic analysis, seismic, steel frame, 481
fracture
cyclic loading, seismic resistant steel connections, 510
frequency crossover
damper, hybrid method, sagged cable, vibration mitigation, 692
full-scale experiment
active vibration control, gyro-stabilizer, numerical analysis, variable gain control, 176
full-size test
bolted rigid moment connection, Northridge earthquake, plastic rotation, repair, welded connection damage, 521
fuzzy optimal control
intelligent control, neural network, 184
fuzzy optimal logic
maximizing decision, shaking table test, 164
geometric optimization
automated yield-line analysis, limit analysis and design of slabs, 647
graphs
bandwidth optimization, finite element nodal ordering, sparsity, stiffness matrices, 86
grillage analogy
bridge, chassis, dynamic, dynamic load allowance, impact factor, interaction, simulation, suspension, tyre, vehicle, wheel, 54
guyed masts
ice load, latticed towers, natural frequencies, wind load, 1097
gyro-stabilizer
active vibration control, full-scale experiment, numerical analysis, variable gain control, 176
haunch
dynamic test, Northridge earthquake, panel zone, steel moment connection, 552
high damping rubber
base isolation, system identification, 720
high damping rubber bearings
fractional derivative models, Maxwell model, seismic isolation, 849

high performance steel
compact criteria, flexural ductility, high strength steel, local buckling, rotation capacity, 323
high strength steel
compact criteria, flexural ductility, high performance steel, local buckling, rotation capacity, 323
highway networks
bridges, deteriorating structures, dynamic programming, life-cycle, optimal resource allocation, reinforced concrete, reliability, 933
hybrid method
damper, frequency crossover, sagged cable, vibration mitigation, 692
hybrid systems
active control, experimentation, implementation, nonlinear control, seismic excitations, shaking table, sliding systems, 144
hybrid wall
concrete-filled tube, RC column S beam system, steel reinforced concrete, 336
Hyogoken–Nanbu earthquake
beam-to-column connection, damage, distribution, Hyogoken–Nanbu earthquake, steel building, 271
hysteretic damper
flexible-stiff mixed frame, viscous damper, 1039
hysteretic devices
dynamic analysis, MDOF-systems, random earthquake loading, structural reliability, 685
hysteretic model
bridge pier, damage index, ductility, inelastic analysis, seismic design, thin-walled, ultimate strength, 472
ice load
guyed masts, latticed towers, natural frequencies, wind load, 1097
impact
braced frames, seismic, 1087
impact echo
bridges, concrete, NDE, radar, ultrasonics, 979
impact factor
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, interaction, simulation, suspension, tyre, vehicle, wheel, 54
implementation
active control, experimentation, hybrid systems, nonlinear control, seismic excitations, shaking table, sliding systems, 144
***in situ* stress**
arch, flatjack, masonry, 5
independent modal space control
earthquake excitation, pole placement, structural control, 792
inelastic
arch, bridge, finite element, masonry, mortar, shakedown, 14
inelastic
damage, dynamics, earthquake, stability, 425
inelastic analysis
bridge pier, damage index, ductility, hysteretic model, seismic design, thin-walled, ultimate strength, 472
inelastic analysis
brittle fracture, seismic performance, steel structures, welded connections, 390
inelastic analysis
building, connections, dynamic analysis, earthquake, fracture, seismic, steel frame, 481
inelastic behavior
performance evaluation, pushover analysis, 452
inelastic design
autostress design, finite element modeling, moment capacity, moment–rotation behavior, nonlinear analysis, rotation capacity, steel bridges, 761
inelastic structures
active control, life cycle cost, risk analysis, structural reliability, 216
infinity controller
LQR controller, reduced-order control, static output feedback, structural control, wind response control, 222
instability
collapse, dynamic instability, nonlinear seismic response, 496
integrity assessment
bridge reliability, field load testing, segmental PC-box bridges, 948
intelligent control
fuzzy optimal control, neural network, 184
interaction
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, simulation, suspension, tyre, vehicle, wheel, 54
interference effects
structures, wind loads, 617
inverse eigenmode problem
design earthquakes, ductility design, elastic–plastic analysis, equivalent linearization, non-classically damped system, soil–structure interaction, 655
joints
composite construction, connections, steel structures, structural design, 113
lattice beam
continuum modeling, spectral element, 587
latticed towers
guyed masts, ice load, natural frequencies, wind load, 1097
LCVA
passive control of buildings, TLCD, 580
life cycle cost
active control, inelastic structures, risk analysis, structural reliability, 216
life-cycle
bridges, deteriorating structures, dynamic programming, highway networks, optimal resource allocation, reinforced concrete, reliability, 933
lifetime
bridges, reliability, risk, safety, 972
limit analysis and design of slabs
automated yield-line analysis, geometric optimization, 647
liquid sloshing
damping screen, flow-dampening devices, Morison's formula, potential flow theory, shaking table tests, tuned liquid damper, vibration control, 593
loads
reliability, resistance, 985
local buckling
compact criteria, flexural ductility, high performance steel, high strength steel, rotation capacity, 323
local buckling
cyclic loading, steel pipe piers, 291
localization
plastic buckling, seismic design, thin-walled structure, 413
local–global model
axisymmetrical shell, cooling tower, finite element analysis, shell structure, 915
long-period gratings
fiber Bragg gratings, fiber optic sensors, structural analysis, 205
***LQR* controller**
infinity controller, reduced-order control, static output feedback, structural control, wind response control, 222
management
bridge, condition, 1020
masonry
arch, bridge, finite element, inelastic, mortar, shakedown, 14
masonry
arch, flatjack, *in situ* stress, 5
masonry
arch, medieval, mortar, pier, Romanesque, 25
masonry structures
cracking, finite elements, plasticity, 37
mass damper
active control, earthquake, wind forces, 134
maximizing decision
fuzzy optimal logic, shaking table test, 164
Maxwell model
fractional derivative models, high damping rubber bearings, seismic isolation, 849
MDOF-systems
dynamic analysis, hysteretic devices, random earthquake loading, structural reliability, 685
medieval
arch, masonry, mortar, pier, Romanesque, 25
modal analysis
construction stage, deck unit, finite element modeling, suspension bridge, 1102
modal coupling
energy transfer, multi-direction ground motions, nonproportional damping, orthogonal effect, seismic response, stiffness coupling, 503
moment capacity
autostress design, finite element modeling, inelastic design, moment–rotation behavior, nonlinear analysis, rotation capacity, steel bridges, 761
moment frames
earthquakes, Northridge earthquake, stability, steel structures, weld damage, 433
moment resistant anchorage
base plate, cast-in-place anchor, cast-in-place plate, embedded plates, moment resistant base plate, plate-anchor assembly, steel anchor, steel plate, steel-lined concrete, 105
moment resistant base plate
base plate, cast-in-place anchor, cast-in-place plate, embedded plates, moment resistant anchorage, plate-anchor assembly, steel anchor, steel plate, steel-lined concrete, 105

moment resisting frame
code design, coupled wall, dual shearwall-frame system, reinforced concrete building, seismic analysis, seismic design, seismic performance, 608
moment-resisting frames
concentrical bracing, dynamic analysis, seismic actions, 1045
moment–rotation behavior
autostress design, finite element modeling, inelastic design, moment capacity, moment–rotation behavior, nonlinear analysis, rotation capacity, steel bridges, 761
Monte Carlo Simulation
bridges, corrosion, damage, degradation, reinforced concrete, time-variant resistance, 960
Morison's formula
damping screen, flow-dampening devices, liquid sloshing, potential flow theory, shaking table tests, tuned liquid damper, vibration control, 593
mortar
arch, bridge, finite element, inelastic, masonry, shakedown, 14
mortar
arch, masonry, medieval, pier, Romanesque, 25
multi-direction ground motions
energy transfer, modal coupling, nonproportional damping, orthogonal effect, seismic response, stiffness coupling, 503
multi-tuned mass dampers
design, parametric study, tuned mass dampers, 193
natural draught cooling towers
cyclic damage, elasto-plastic simulations, 899
natural frequencies
buckling, cooling towers, 868
natural frequencies
guyed masts, ice load, latticed towers, wind load, 1097
natural frequency
fluid-elastic structure interaction, orthotropic cantilever cylindrical shells, 732
NDE
bridges, concrete, impact echo, radar, ultrasonics, 979
neural network
fuzzy optimal control, intelligent control, 184
non-classically damped system
design earthquakes, ductility design, elastic–plastic analysis, equivalent linearization, inverse eigenmode problem, soil–structure interaction, 655
non-linear analysis
blast response, plate structures, 1079
non-linearities
cooling tower, design, 890
nonlinear
arch, buckling, elastic, postbuckling, 571
nonlinear analysis
autostress design, finite element modeling, inelastic design, moment capacity, moment–rotation behavior, rotation capacity, steel bridges, 761
nonlinear behavior
buckling, cylindrical shell, dynamic stability, finite elements, thin-walled structures, wind load, 752
nonlinear control
active control, experimentation, hybrid systems, implementation, seismic excitations, shaking table, sliding systems, 144
nonlinear seismic response
collapse, dynamic instability, instability, 496
nonproportional damping
energy transfer, modal coupling, multi-direction ground motions, orthogonal effect, seismic response, stiffness coupling, 503
nonuniform ground excitations
eccentric, torsional response, 677
Northridge earthquake
bolted rigid moment connection, full-size test, plastic rotation, repair, welded connection damage, 521
Northridge earthquake
dynamic test, haunch, panel zone, steel moment connection, 552
Northridge earthquake
earthquakes, moment frames, stability, steel structures, weld damage, 433
Northridge earthquake
seismic design, steel structures, 300
numerical analysis
active vibration control, full-scale experiment, gyro-stabilizer, variable gain control, 176
numerical simulation
bearing devices, buckling, damages, dynamic interaction, seismic performance, steel structures, 282
optimal resource allocation
bridges, deteriorating structures, dynamic programming, highway networks, life-cycle, reinforced concrete, reliability, 933
orthogonal effect
energy transfer, modal coupling, multi-direction ground motions, nonproportional damping, seismic response, stiffness coupling, 503
orthotropic cantilever cylindrical shells
fluid-elastic structure interaction, natural frequency, 732
panel zone
dynamic test, haunch, Northridge earthquake, steel moment connection, 552
parametric study
design, multi-tuned mass dampers, tuned mass dampers, 193
partially restrained connections
composite connections, connections, seismic design, steel frames, 364
passive control of buildings

active control, experimentation, hybrid systems, implementation, nonlinear control, shaking table, sliding systems, 144
seismic isolation
fractional derivative models, high damping rubber bearings, Maxwell model, 849
seismic performance
bearing devices, buckling, damages, dynamic interaction, numerical simulation, steel structures, 282
seismic performance
brittle fracture, inelastic analysis, steel structures, welded connections, 390
seismic performance
code design, coupled wall, dual shearwall-frame system, moment resisting frame, reinforced concrete building, seismic analysis, seismic design, 608
seismic resistant steel connections
cyclic loading, fracture, 510
seismic response
energy transfer, modal coupling, multi-direction ground motions, nonproportional damping, orthogonal effect, stiffness coupling, 503
seismic restrainers
bearing failures, bridges, brittle fractures, buckling, Canadian practice, design codes, earthquake, seismic, steel, steel columns, 1063
shakedown
arch, bridge, finite element, inelastic, masonry, mortar, 14
shaking table
active control, experimentation, hybrid systems, implementation, nonlinear control, seismic excitations, sliding systems, 144
shaking table test
fuzzy optimal logic, maximizing decision, 164
shaking table tests
damping screen, flow-dampening devices, liquid sloshing, Morison's formula, potential flow theory, tuned liquid damper, vibration control, 593
shell structure
axisymmetrical shell, cooling tower, finite element analysis, local–global model, 915
shotcrete
beam, rehabilitation, reinforced concrete, reinforcement, 631
simulation
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, suspension, tyre, vehicle, wheel, 54
singular perturbation technique
a boundary layer theory of shell buckling, combined loading, postbuckling, stiffened laminated cylindrical shell, structural stability, 738
sliding systems
active control, experimentation, hybrid systems, implementation, nonlinear control, seismic excitations, shaking table, 144
soil–structure interaction
design earthquakes, ductility design, elastic–plastic analysis, equivalent linearization, inverse eigenmode problem, non-classically damped system, soil–structure interaction, 655
sparsity
bandwidth optimization, finite element nodal ordering, graphs, stiffness matrices, 86
spectral element
continuum modeling, lattice beam, 587
spectral representation
bridge, stochastic simulation, wind field, 837
stability
damage, dynamics, earthquake, inelastic, 425
stability
earthquakes, moment frames, Northridge earthquake, steel structures, weld damage, 433
static output feedback
infinity controller, *LQR* controller, reduced-order control, structural control, wind response control, 222
steel
bearing failures, bridges, brittle fractures, buckling, Canadian practice, design codes, earthquake, seismic, seismic restrainers, steel columns, 1063
steel
composite, concrete, seismic behavior, 355
steel anchor
base plate, cast-in-place anchor, cast-in-place plate, embedded plates, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel plate, steel-lined concrete, 105
steel bridges
autostress design, finite element modeling, inelastic design, moment capacity, moment–rotation behavior, nonlinear analysis, rotation capacity, 761

steel building
beam-to-column connection, damage, distribution, Hyogoken–Nanbu earthquake, 271
steel columns
bearing failures, bridges, brittle fractures, buckling, Canadian practice, design codes, earthquake, seismic, seismic restrainers, steel, 1063
steel connections
beam-to-column connections, seismic connections, welded connections, 1030
steel frame
building, connections, dynamic analysis, earthquake, fracture, inelastic analysis, seismic, 481
steel frame
damage level, retrofit planning, seismic diagnosis, upgrading planning, 533
steel frames
composite connections, connections, partially restrained connections, seismic design, 364
steel highway bridge pier
ductility, seismic capacity, 540
steel moment connection
dynamic test, haunch, Northridge earthquake, panel zone, 552
steel pipe piers
cyclic loading, local buckling, 291
steel plate
base plate, cast-in-place anchor, cast-in-place plate, embedded plates, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel anchor, steel-lined concrete, 105
steel reinforced concrete
concrete-filled tube, hybrid wall, RC column S beam system, 336
steel structures
bearing devices, buckling, damages, dynamic interaction, numerical simulation, seismic performance, 282
steel structures
brittle fracture, inelastic analysis, seismic performance, welded connections, 390
steel structures
composite construction, connections, joints, structural design, 113
steel structures
earthquakes, moment frames, Northridge earthquake, stability, weld damage, 433
steel structures
Northridge earthquake, seismic design, 300
steel-lined concrete
base plate, cast-in-place anchor, cast-in-place plate, embedded plates, moment resistant anchorage, moment resistant base plate, plate-anchor assembly, steel anchor, steel plate, 105
stiffened laminated cylindrical shell
a boundary layer theory of shell buckling, combined loading, post-buckling, singular perturbation technique, structural stability, 738
stiffening ring
cooling tower shell, finite element analysis, 909
stiffness coupling
energy transfer, modal coupling, multi-direction ground motions, nonproportional damping, orthogonal effect, seismic response, 503
stiffness matrices
bandwidth optimization, finite element nodal ordering, graphs, sparsity, 86
stochastic model
area-dependency, assembly regions, EUDL, extraordinary load, sustained load, 805
stochastic simulation
bridge, spectral representation, wind field, 837
strength
composite column, ductility, 347
strength reduction factor
capacity design, concentrically braced steel frames, seismic behaviour, 779
stress responses
aeroelastic wind tunnel tests, cooling tower groups and adjacent buildings, design factors, wind interference, 874
structural analysis
fiber Bragg gratings, fiber optic sensors, long-period gratings, 205
structural control
earthquake excitation, independent modal space control, pole placement, 792
structural control
infinity controller, *LQR* controller, reduced-order control, static output feedback, wind response control, 222
structural design
composite construction, connections, joints, steel structures, 113
structural dynamics
acceleration feedback, active control, earthquake engineering, 62
structural performance
base-isolated structure, earthquake-resistant design, flexible–stiff mixed structure, 447
structural reliability
active control, inelastic structures, life cycle cost, risk analysis, 216
structural reliability
contour inflation, environmental contours, experimental data, TLP tendons, 601
structural reliability
dynamic analysis, hysteretic devices, MDOF-systems, random earthquake loading, 685
structural stability
a boundary layer theory of shell buckling, combined loading, post-buckling, singular perturbation technique, stiffened laminated cylindrical shell, 738
structural steel
brittle fracture, earthquake resistance, 310
structures
interference effects, wind loads, 617
suppression of deformation concentration
bow-shaped deflection mode, earthquake resistant design, symmetry limit, tall buildings, 372
surface stress density method
form-finding, tensile membrane, 712
suspension
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, tyre, vehicle, wheel, 54
suspension bridge
construction stage, deck unit, finite element modeling, modal analysis, 1102
sustained load
area-dependency, assembly regions, EUDL, extraordinary load, stochastic model, 805
symmetry limit
bow-shaped deflection mode, earthquake resistant design, suppression of deformation concentration, tall buildings, 372
system identification
base isolation, high damping rubber, 720
tall buildings
bow-shaped deflection mode, earthquake resistant design, suppression of deformation concentration, symmetry limit, 372
tensile membrane
form-finding, surface stress density method, 712
thin-walled
bridge pier, damage index, ductility, hysteretic model, inelastic analysis, seismic design, ultimate strength, 472
thin-walled structure
localization, plastic buckling, seismic design, 413
thin-walled structures
buckling, cylindrical shell, dynamic stability, finite elements, nonlinear behavior, wind load, 752
time-domain simulation
cooling towers, wind loading, 881
time-variant resistance
bridges, corrosion, damage, degradation, Monte Carlo Simulation, reinforced concrete, 960
TLCD
LCVA, passive control of buildings, 580
TLP tendons
contour inflation, environmental contours, experimental data, structural reliability, 601
torsional response
eccentric, nonuniform ground excitations, 677
truss structure
dynamic analysis, post-buckling behavior, 384
tuned liquid damper
damping screen, flow-dampening devices, liquid sloshing, Morison's formula, potential flow theory, shaking table tests, vibration control, 593
tuned mass dampers
design, multi-parametric study, tuned mass dampers, 193
two phase
fluid flow, pipes, vibration, 726
tyre
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, suspension, vehicle, wheel, 54
ultimate strength
bridge pier, damage index, ductility, hysteretic model, inelastic analysis, seismic design, thin-walled, 472
ultrasonics
bridges, concrete, impact echo, NDE, radar, 979
upgrading planning
damage level, retrofit planning, seismic diagnosis, steel frame, 533

variable gain control
active vibration control, full-scale experiment, gyro-stabilizer, numerical analysis, 176
vehicle
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, suspension, tyre, wheel, 54
vibration
fluid flow, pipes, two phase, 726
vibration control
damping screen, flow-dampening devices, liquid sloshing, Morison's formula, potential flow theory, shaking table tests, tuned liquid damper, 593
vibration mitigation
damper, frequency crossover, hybrid method, sagged cable, 692
viscous damper
flexible-stiff mixed frame, hysteretic damper, 1039
weld damage
earthquakes, moment frames, Northridge earthquake, stability, steel structures, 433
welded connection damage
bolted rigid moment connection, full-size test, Northridge earthquake, plastic rotation, repair, 521
welded connections
beam-to-column connections, seismic connections, steel connections, 1030
welded connections
brittle fracture, inelastic analysis, seismic performance, steel structures, 390
welded connections
ductility, seismic design, 249
wheel
bridge, chassis, dynamic, dynamic load allowance, grillage analogy, impact factor, interaction, simulation, suspension, tyre, vehicle, 54
wind field
bridge, spectral representation, stochastic simulation, 837
wind forces
active control, earthquake, mass damper, 134
wind interference
aeroelastic wind tunnel tests, cooling tower groups and adjacent buildings, design factors, stress responses, 874
wind load
buckling, cylindrical shell, dynamic stability, finite elements, nonlinear behavior, thin-walled structures, 752
wind load
guyed masts, ice load, latticed towers, natural frequencies, 1097
wind loading
cooling towers, time-domain simulation, 881
wind loads
interference effects, structures, 617
wind response control
infinity controller, *LQR* controller, reduced-order control, static output feedback, structural control, 222
Young's modulus
ASR, compressive strength, expansion assessment, 785
